

Conditions of Selective Cutting and Shelterwood Cutting in Limited Management Zone of Protected Natural Objects and Shores and Banks

1. Following selective cutting, the basal area (m ² /ha) of the upper layer of the stand must not be below: Stand		Quality class						
1A	1	2	3	4	5	5A		
Stand of coniferous and hard broadleaved trees	26	24	22	20	18	16	14	
Stand of soft broadleaved trees	22	20	18	16	14	12	10	

2. Shelterwood compartment cutting is executed in several cutting stages and cutting must not bring the crop density below:	No. of cutting stages	Crop density after stage 1	Crop density after stage 2	Crop density after stage 3
Crop density before cutting 65% and more	3	50%	30%	0%
45–64%	2	30%	0%	0%
44% and less	1		0%
